1. Modules

Modules

- Modules are to rings as vector spaces are to fields.
- Modules are to rings as sets with group actions are to groups.

Definition of (left) modules

Definition: Let R be a ring (for now, not necessarily commutative and not necessarily having a unit). A *left R-module* is an abelian group M together with a map $R \times M \to M$ (written $(r, m) \mapsto rm$) such that:

- $r(m_1 + m_2) = rm_1 + rm_2$
- $(r_1 + r_2)m = r_1 m + r_2 m$
- $r_1(r_2 m) = (r_1 r_2)m$

If R has a unit element 1, we also require $1m = m$ for all $m \in M$.
